Quick setup — if you've done this kind of thing before

[⟱ Set up in Desktop] or [HTTPS | SSH] git@github.com:A87kamui/Speedy-Sauce: 📋

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

...or create a new repository on the command line

```
echo "# Speedy-Saucer" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin git@github.com:A87kamui/Speedy-Saucer.git
git push -u origin main
```
📋

...or push an existing repository from the command line

```
git remote add origin git@github.com:A87kamui/Speedy-Saucer.git
git branch -M main
git push -u origin main
```
📋

...or import code from another repository

You can initialize this repository with code from a Subversion, Mercurial, or TFS project.
